Why did you change, or maintained, your decision between the 1st and 3rd section?

I changed my decision because I didn't want to further risk it with only gamble 3 having a lower chance if I rolled even so I chose gamble 2 in the ~~first~~ section.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I changed my decision between
the 1st and 3rd because I wanted
to pick a slightly higher risk.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I changed my decision because I ~~was~~ began to understand the experiment more after actually seeing the numbers I was rolling. I saw that gamble 5 was the best payoff in both even and odd scenarios and switched my decision after the second section.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision between the 1st and 3rd sections because assuming that the dice are fair, gamble #6 has the best chance of the highest possible payoff, even though it also has the highest chance of the lowest possible payoff. I don't stand to lose money I already have, so gamble #6 makes the most sense to me.

Why did you change, or maintained, your decision between the 1st and 3rd section? ^{benefit}

I went with gamble 6 as it had the highest ~~upside~~ ^{benefit} for a single realization, 50% chance of the highest amount. For section 2 or multiple realizations, I would always go with gamble 5 as the expected value after many realizations is larger than any other option, so I'd make the most money that way (at least, I'd be most likely to).

Why did you change, or maintained, your decision between the 1st and 3rd section?

Decision changed ~~once~~ for 2 periods, intention: try to earn more
as I get a lot of ODD in 2nd section. However, I
realised the payment of even is too small, so I changed
back to gamble 5

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision between 1st and 3rd because

Gamble 5 has the highest payoff for both ~~events~~ sections,
when you add both the payoff for the odd and the even event

Why did you change, or maintained, your decision between the 1st and 3rd section?

It seems the payoff is very random. So I think it is worth trying for a higher payoff since there is nothing to lose. Meanwhile gamble 5 seems to be a good value compared with 6. Because in 6 odd event only + 6 when even event is - 10.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I didn't change my mind because there is some payoff regardless of the result, and on the chance I get an odd number I'll be good and if I don't then it's as big of a loss that choosing 6 would have been.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision because either way there is a 50% chance of the dice roll to be odd or even and 50% for it to be selection 1 or 3 so if they are the same my payout would rely entirely on the random dice roll.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I changed my decision between the 1st and 3rd section from gamble 3 to gamble 4 because I figured I will still leave with more money than I came in with, so a higher gamble is not that big of a deal. I didn't choose gamble 5 or 6 because the risk seemed too high, and I wanted a bit more money even if I rolled an even result.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I ~~changed~~^{maintained} my decision because I felt like with the probability of 50% at some points more than others or ~~high~~ there was a higher probability that I would role odds over evens. With higher risk there is a higher reward and there is no real risk for me. Option 4 is still a somewhat safe option but with a fairly high reward

Why did you change, or maintained, your decision between the 1st and 3rd section?

I wanted to be more risky with, hope fully,
more payoff. this was also because I felt
fairly confident about the cognition test
and that I could make more money there

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision between my first + 3rd choice because I know the risks of the choice going in, and I kept the mentality of go 'big or go home' when making my choice choices. Also, the addition of the two possible choices is greater (so more \$'on average' in gamble 6 than gamble 1)

Why did you change, or maintained, your decision between the 1st and 3rd section?

~~The~~ I changed my decision to have a greater range of probability of being selected. For decision 1 the probability of both A and B were close, however for decision 2 the probability of A was greater than B.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision cause the money was little to no concern for me but instead if I won a "high stakes" bet. But I also wanted to maximize my expected return so I chose the option with the highest expected value if repeated infinitely. That is gamble #5, with an expected value of 36 pts per roll.
