Why did you change, or maintained, your decision between the 1st and 3rd section?

I decided to maintain my decision because it seemed like a safe option to have somewhat of a more even split, although I was tempted to change my decision.

with some risk still

Why did you change, or maintained, your decision between the 1st and 3rd section?

In the 1st section I chose gamble 5 because it is the option with high reward if odd and moderate or if even. I changed it to gamble 4 because I felt statistically it is smarter to gamble on it being odd but have a solid option in case it lands even. I know that odds are 50% but I did get a lot more odd results than even, the two results were close but there were definitely more odds.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I choose 4 for the most of time even during the free-election section. Because I realize that with gamble 4, I would be satisfied with either outcome, ~~odd~~ odd or even, i.e. ⁵² ~~44~~ points or 16 points.

Why did you change, or maintained, your decision between the 1st and 3rd section?

In the first section, while I did not want to go with the first test, I wanted to make sure I try to get the most amount with the less risk. With the third section, I just wanted to test my luck.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision because it would still be determined by a 50/50. 50, there was no way of knowing what my final result will be. I wanted to choose a gamble that had a little bit of profit, but wouldn't hurt too much if I lost

Why did you change, or maintained, your decision between the 1st and 3rd section?

I stayed with my decision because the payout seemed pretty decent either way, and the difference from option 1, 2 was only 4 less payout for an even payout but 8 higher for an odd payout, so it seemed like a lower-risk higher-reward option.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision because the probability between even and odd is the same. I do not like risk, so I choose the one which can help me gain same amount on two results.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I know logically that no matter what happened in section 2, the probability of my outcome is the same. Therefore it didn't really make sense for me to change my ~~outcome~~ decision. Although I will admit that I was tempted when I rolled like 8 odds in a row.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I don't really want to choose the extremes, so I always decide between 3 or 4. In the beginning, I have been more cautious, so I choose Crumble 3. After a few rounds, I feel like ~~that~~ I should be bolder, so I choose 4.

Why did you change, or maintained, your decision between the 1st and 3rd section?

As I did the free-election portion, I realized rolling odds are easier than I expected. However, they were not as frequent in the earlier rolls, so I changed my gamble from 3 to 4 so I was not betting it all on rolling odds.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I feel like even though the dice was even probability, my own die tended to land on even more. The first time I chose in section 1, I just wanted to pick a safe probability. The 3rd section, I picked an even safer option with what I felt were better odds. I feel like dice tend to roll on an even number, but wanted to leave room for error.

Please answer the following questions. You will get another \$2 for finishing this survey

Why did you change, or maintained, your decision between the 1st and 3rd section?

I changed my decision from 4 to 5. 4 has an expected value of $\frac{58+16}{2} = \frac{68}{2} = 34$. 5 has $E[X] = \frac{72}{2} = 36$. Though the expected value of 5 was the highest of all the selections, I initially chose 4 since we only get 1 roll so would rather a more consistent payout. 1-3 felt like too much of a decrease in expected payout. I changed to 5, since I was convinced after section 2 the die I had weighed more heavily toward odd.-overwhelmingly so. (I think it may have been statistically significant).

Why did you change, or maintained, your decision between the 1st and 3rd section?

I changed my decision because during the free selection I rolled my original gamble multiple times and ended with the smaller amount. so I chose the one that had a decent payout that I was able to roll the bigger number.

Based on my rolls the odds were not in favor of the bigger number winning from my first choice

Survey:

Please answer the following questions. You will get another \$2 for finishing this survey

Why did you change, or maintained, your decision between the 1st and 3rd section?

I changed my decision between 1 and 3 to make it more conservative because after rolling the preselected & free election and seeing the resulting payments, I noticed I was rolling for better overall payments in gambles 1, 2, and 3, and though the odd payments for gambles 4, 5, & 6 are much higher, the even payments are much lower. After analyzing the risks of the higher gambles, I decided to change my decision to a lower gamble so that I would end up with a decently sized payment as opposed to the possibility of a low payment. In this way, I suppose I could be categorized as risk averse because after seeing the results of the rolls I changed my decision to be less risky, however I did not choose gamble 1 because I still like the idea of some potential risk, however small it is in gamble 2.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision because I wanted to gamble for larger profit. The chances are 50% odd, 50% even, so no point of really calculating which side would be better
