Why did you change your decision in stage 3 (compared to the first stage)?

Going through the 24 sessions in section 2, I find myself more willing to make risks as the benefit outweighs the cost.

Why did you change your decision in stage 3 (compared to the first stage)?

Risk vs reward wise #2 logically makes more sense with multiple gambles. #6 was more fun but risk does not match reward.
I don't enjoy math - but if I did, I would have calculated the monetary value of each gamble. & then before the risk vs reward of each. Intuition hopefully worked out.

Why did you change your decision in stage 3 (compared to the first stage)?

50/50 choice regardless of gamble, matter of preference. Feeling more lucky, chose the last gamble. Also Initially chose gamble 1 because it was ~~any~~ guaranteed ~~the~~ good payment.

Why did you change your decision in stage 3 (compared to the first stage)?

I did not change my decision, gamble 5 averaged 30 points in the long run which was the most of any of the gambles. Not the safest gamble but the best in the long run.

Why did you change your decision in stage 3 (compared to the first stage)?

I decided that since the odds of getting an odd number is the same as the odds of getting an even number, then I might as well choose Gamble 6 to maximize my payoff if I get an odd number. Also, I would still be getting money from the other sections, ~~so~~ even if I end up getting an even number. ~~End~~

Why did you change your decision in stage 3 (compared to the first stage)?

I changed my decision from gamble 5 in first stage to gamble 4 in the second stage to play it more safe. While I believe that I have been more likely to roll an odd event, I feel as though ~~while~~ gamble 4 is a bet that is both risky enough for a higher payout but still safe to recieve payment anyways. 5 was a bit too risky considering it goes down to 12 units of pay. While I maybe wanted the chance to change, in order to add variety, to my chances I feel as though going down to 6 will likely lead to ~~almost~~ no payment.

Why did you change your decision in stage 3 (compared to the first stage)?

I did not change my decision. It was risk averse in both stages. I think more money would be a better measure of human response to risk.

Why did you change your decision in stage 3 (compared to the first stage)?

I didn't. I go big or go home. I don't get that much regardless, so might as well try to make the most of this

Why did you change your decision in stage 3 (compared to the first stage)?

I chose gamble 3 for stage 3 so
there's some chance of getting a higher
payment and less chance of any
getting little for an even event.
For some rounds in stage 2 I wanted
to gamble a little and for other rounds
I wanted to play it safe.

Why did you change your decision in stage 3 (compared to the first stage)?

Depending on the results, just notice thant the event A (or odd)
aluts, more than event B (even).
    much

Why did you change your decision in stage 3 (compared to the first stage)?

I wanted to take a bigger risk

Why did you change your decision in stage 3 (compared to the first stage)?

My plan from the beginning was to do one relatively safe bet and one risky bet since probabilities are the same regardless.

Why did you change your decision in stage 3 (compared to the first stage)?

It's only 1 gamble so I went for the choice that may get a relatively large amount of money if it was odd but wasn't 516 because the amount of money for the even roll was too low.

Why did you change your decision in stage 3 (compared to the first stage)?

I didn't because it just felt right.

Why did you change your decision in stage 3 (compared to the first stage)?

Did not change decision.

Why did you change your decision in stage 3 (compared to the first stage)?

I Changed from gamble 4 to 5 because I realized 5 has the largest potential payoff.

Why did you change your decision in stage 3 (compared to the first stage)?

Regardless of the odds, Event A tends to have a higher payout than Event B. I want to maximize the payout while still having a sizeable payout of Event B. Thus, I chose Gamble 5 from Gamble 3.

Why did you change your decision in stage 3 (compared to the first stage)?

I didn't change my decision.

Why did you change your decision in stage 3 (compared to the first stage)?

i did not because i got more odd rolls than even rolls. Also I like the number 4.

please slow down during the rolls!

Why did you change your decision in stage 3 (compared to the first stage)?

I did not change my decision in stage 3

Why did you change your decision in stage 3 (compared to the first stage)?

I changed it because the results were landing on "odd" therefore base on the results there 4 might be a higher probability to land with an odd number.
